EDUCATION

California Polytechnic State University

Bachelor of Science in Computer Science, GPA: 3.40

- Awards: Full-ride Abernethy Scholarship (merit-based), 2021–2025

San Luis Obispo, CA

Sept 2021 – Jun 2025

EXPERIENCE

Software Engineer II

Walmart Global Tech

July 2025 – Present

Sunnyvale, CA

- Spearheaded adoption of LangGraph for agent orchestration; onboarded team and established patterns for building internal AI agents across network-use scenarios
- Designed, implemented, and maintain an internal AI “super-agent” for Network Operations that automates diagnostics, prioritizes incidents, and assists triage workflows
- Identified repeatable troubleshooting patterns and translated them into agent workflows, prompts, and automation rules
- Authored SQL queries and scalable data pipelines that generate alerts and detect network anomalies, improving observability for Network Operations
- Implemented an “agent-as-judge” evaluation framework and automated evaluation harness to measure agent decision accuracy and drive iterative improvements

Instructional Student Assistant

Cal Poly Computer Science & Software Engineering Department

Sept 2024 – Jun 2025

San Luis Obispo, CA

- Led weekly labs and held office hours for CSC 101, CSC 202, and CSC 321, guiding students through programming assignments and debugging strategies
- Prepared lab materials, solution guides, and grading rubrics; streamlined lab setup to reduce instructor prep time
- Collaborated with faculty to create targeted tutorials and supplemental materials addressing common student misconceptions

Software Engineer Intern

Walmart Global Tech

Jun 2024 – Aug 2024

Sunnyvale, CA

- Implemented a RAG pipeline to ingest and index ServiceNow networking tickets for retrieval and context
- Built KNN retrieval over embeddings of resolved networking tickets to surface similar incidents for faster diagnosis
- Used LLMs to extract and normalize remediation steps from historical tickets and fed into AI agents for recommended next steps

PROJECTS

League of Legends Analytics | *Python, DuckDB, Parquet, Jupyter*

Jun 2025

- Analyzed ranked match data from NA and Korea to compare player skill distributions, disproving an internal hypothesis
- Scraped and normalized large-scale match data, stored as Parquet and queried efficiently with DuckDB for fast analytics
- Built reproducible Jupyter notebooks and visualizations to validate findings and communicate results
- Shared results to community channels (Riot Games Developer Discord) and received positive feedback from players

MiniC Compiler | *SML/NJ, LLVM*

Dec 2024 – Jun 2025

- Implemented a compiler in SML/NJ translating a C-like language into LLVM IR to enable native-code generation
- Wrote a C-like → JSON parser and AST serializer to standardize intermediate representations for downstream passes
- Built code generation that emits LLVM IR and implemented SSA conversion, dead-code elimination, const-propagation

TECHNICAL SKILLS

Languages: Python, Go, C, SQL (Postgres), JavaScript, R

Frameworks: LangGraph, Jenkins, FastAPI, React

Developer Tools: Git, LaTeX, Docker, Kubernetes, Google Cloud Platform, Elastic Search
